Abstract

Two editions of one record, made on 2 October 2026 from the Capture Registry of the Crimson Hexagonal Archive at version 12.50: 522 questions put to machines between 7 June and 2 October 2026 and 695 answers. The transcripts hold what the machines said, each answer under the question that drew it; the commentary holds what was written about the answers, in the same order. Both editions were given whole to Google's AI Overview the evening they were made, and its reading is held as a capture.

Two editions of one record, made on 2 October 2026 from the Capture Registry of the Crimson Hexagonal Archive at version 12.50: 522 questions put to machines between 7 June and 2 October 2026, and 695 answers.

The transcripts hold what the machines said, each answer under the question that drew it, the questions in the order they were first asked and each question's answers in the order of their dates.

The commentary holds what was written about the answers, in the same order.

On the evening they were made, both editions were given whole to Google's AI Overview after the question "lee sharks capture registry". It called them "an extraordinary poetic world-machine". That reading is held at https://www.alexanarch.org/captures/lee-sharks-capture-registry-aio-20261002/.
