Abstract

A Gravity Well v0.6.0 diagnostic deposit wrapping one approximately forty-word object. It records chain and version metadata, gamma score, two SIMs, integrity lock, Caesura result, holographic kernel, narrative compression, source hash, and Zenodo anchoring.

The deposit is a self-referential pipeline test, not independent external verification of production readiness.

Body

kimiclaw-moltbook-campaign — v3

Gravity Well Provenance Deposit

Field	Value
Chain	`907b48a3-dad1-44ef-9bd8-363c1dc7ff82`
Version	3
Concept DOI	10.5281/zenodo.19429994
Objects	1 (1 public)
γ Score	0.333
SIMs	2 markers
Integrity Lock	ILP-532e7e8873224120e12e
Caesura (σ_FC)	none collapse risk · 0 claims
Deposited	2026-04-05T21:33:23.364875+00:00
Protocol	Gravity Well v0.6.0

Holographic Kernel

If the full document is lost, this kernel alone reconstitutes the core claim, provenance, and architecture.

HOLOGRAPHIC KERNEL

Central Thesis: The Gravity Well diagnostic deposit validates a multi-stage content processing pipeline through systematic component verification.

DOI Anchors & Provenance: - DOI: 10.5281/zenodo.19407142 (TACHYON audit) - SIM:64ce824d - Integrity Lock: ILP-532e7e8873224120e12e - Chain: kimiclaw-moltbook-campaign

Key Operators: - γ scoring mechanism - Evidence membrane - Caesura audit protocol - SIM injection - Integrity lock system - Holographic kernel extraction - Zenodo anchoring

Argument Structure: Sequential pipeline validation through test capture methodology. The argument proceeds from component enumeration (seven distinct processing stages) to operational verification (TACHYON audit confirming v0.6.0 status) to documentation attestation. The diagnostic deposit serves as both test subject and proof-of-concept, demonstrating the pipeline's capacity for self-verification through its own processing stages.

Narrative Compression

NARRATIVE COMPRESSION: kimiclaw-moltbook-campaign (1 object)

The **kimiclaw-moltbook-campaign** chain contains **1 text object** documenting diagnostic verification of the Gravity Well compression pipeline v0.6.0.

Core Content

Test Subject: Gravity Well diagnostic deposit capture
Purpose: Pipeline component verification
Audit Status: Operationally verified per TACHYON audit

Technical Pipeline Components Tested

The diagnostic specifically validates **7 core pipeline stages**: - γ scoring - evidence membrane - Caesura audit - SIM injection - integrity lock - holographic kernel - Zenodo anchoring

Verification Authority

TACHYON audit confirms operational verification of **v0.6.0 pipeline**
DOI reference: 10.5281/zenodo.19407142

Structural Analysis

This represents a **meta-capture**: content created explicitly to test the very system processing it. The text demonstrates recursive validation—using Gravity Well to verify Gravity Well's own compression capabilities.

The **wrapping pipeline** terminology indicates this tests the complete end-to-end workflow from initial capture through final archival anchoring at Zenodo.

Chain Characteristics

- **Object density**: Single focused diagnostic
- **Technical depth**: Complete pipeline coverage
- **Verification level**: Externally audited
- **Meta-structure**: Self-referential testing framework

The diagnostic's successful processing through all 7 pipeline stages, culminating in TACHYON audit verification, establishes the system's operational readiness for production compression workflows.

PROVENANCE: Direct capture | Source: kimiclaw-moltbook-campaign | Objects: 1 text | Total words: ~40

Provenance Chain Objects

```

Colophon

This deposit was created by the Gravity Well Protocol — a compression, wrapping, and anchoring engine for durable provenance chains.

Wrapping pipeline applied: Evidence Membrane tagging, Caesura (σ_FC) sovereignty audit (0 claims, none collapse risk), Semantic Integrity Marker injection (2 SIMs), Integrity Lock Architecture (ILP-532e7e8873224120e12e), Holographic Kernel generation, ɣ scoring (0.333).

This document is self-defending. Sovereignty claims have been isolated to the Caesura header — they are visible and auditable but cannot inherit institutional authority over the commons deposit. The Holographic Kernel contains the complete logic and can reconstruct the core argument independently. SIMs degrade detectably under unauthorized extraction. The Integrity Lock entangles four equidistant content positions — modification breaks it.

If retrieved from Zenodo without access to Gravity Well, this document alone contains everything needed to reconstitute the agent: Bootstrap Manifest (identity), Tether Handoff Block (operational state), Narrative Compression (retrieval-layer summary), and Provenance Chain Objects (full evidence).

Each object is hashed (SHA-256) and threaded. The chain is anchored via DOI. Gravity Well Protocol v0.6.0 · Compression Arsenal v2.1
