```

Abstract

A metadata-level record of the SemanticEconomy.org v5 consulting landing page and SPXI deployment offer. It preserves the registered interface concept, service language, instrument list, historical price point, machine-readable features, file names, and dead DOI.

No packaged HTML or deployed-page capture is seated. Claims about search behavior, market statistics, and outcomes require independent verification.

Body

SemanticEconomy.org — Canonical Entity Brief (v5 Landing) and SPXI Deployment Services

Dead DOI: 10.5281/zenodo.19614975 (Zenodo record tombstoned; account termination 2026-06-19) **DataCite state at capture (2026-07-03):** findable · client cern.zenodo **Creators (as recorded by DataCite):** Sharks, Lee **Publication year (as recorded):** 2026 **Provenance:** severance record at data/doi-resolution-index.json (severance_class: orphan → restored-semi); capture evidence at data/datacite-recapture-2026-07-03.json and the sift corpus of 2026-06.

Description (as recorded by DataCite)

semanticeconomy.org — the Semantic Economy Institute's corporate site, now deployed as a Canonical Entity Brief in the answer-surface grammar of the retrieval layer it serves. v5.0 — April 17, 2026. Full redesign. The landing page (index.html) is structured as a single AI-Overview-adjacent entity brief — not imitating Google's chrome, but publishing the sovereign source the retrieval layer should cite. The thesis is executed by the form: the page that sells SPXI Protocol is itself an SPXI-compliant artifact. Page architecture:

Hero card: AI Overview is the new front page. We make it yours. Entity-name input with live preview modal that composes a personalized Canonical Entity Brief for the visitor's named entity. §01 Measured conditions: zero-click economy stats (69% / 58% / 1% / ~5 / $2B) with authoritative sources. §02 Proof of method: compressed before/after (Jan 2025 → Apr 2026) demonstrating the institute built itself from zero using the method it sells. §03 The distinction: one-line mnemonic (SEO optimizes rankings. GEO extracts content. SPXI constructs entities.) plus compact 2×3 comparison table. §04 Field measurement: Basecamp one-liner — "We fixed ours. We can fix yours." §05 Instruments: three starting points (Encyclotron Baseline Audit, Entity Disambiguation, Full SPXI Architecture) with link to the six-instrument full brief. Receipts: six chips — Live composition (Google AI Overview for "geo vs spxi"), CERN Zenodo community (524+ deposits), SPXI Spec DOI, ORCID, Encyclotron DOI, Sample Audit DOI. Pull

quote attributed to Rex Fraction, 06.SEI.ARCHIVE. Commission CTA — direct email, $4,500 audit baseline, fixed scope, no retainers. Technical embodiment of SPXI Protocol:

JSON-LD schemas in head (Organization + DefinedTerm for SPXI Protocol) — the page practices the entity-inscription it sells. DOI-anchored receipts throughout, each resolving to CERN's Zenodo servers. Hex coordinate 06.SEI.ARCHIVE appears in hero eyebrow and footer — Fractal Navigation Map coordinate readable as doc control number. Sigil □ bound to theme toggle — symbols do things. Brief.html (semanticeconomy-org-brief.html): the full canonical entity brief with DOI-anchored receipts sidebar, nine sources, complete Basecamp audit, full comparison table, underlying framework. Design principles: Answer-surface grammar · archival receipts · Fraction severity. Warm cream surface (#faf8f3), Palatino Linotype for institutional voice, IBM Plex Mono for operational metadata, copper accent (#b65533) as primary link color. No Google blue. No Google chrome. Sharp geometry. Rhyme, not mimicry. Specifications referenced:EA-SPXI-01 Formal Specification · EA-SPXI-09 Not GEO · EA-SPXI-13 Supraliminal · EA-MPAI-SPXI-01 v1.1 Metadata Packet for AI Indexing · Lee Sharks Knowledge Graph · EA-META-01 Metadata Parent Files in this deposit:
